## RESEARCH INTERESTS

My career is committed to bridging the gap between research and practice, with a particular focus on understanding and facilitating the translation of evidence-based programs into school and community settings that serve children, youth, and families at risk for poor outcomes. This includes children who live in poverty, racial and ethnic minority children, and children who have experienced trauma. **The goal of my research program is to eliminate disparities in mental health and academic achievement by improving the dissemination and implementation of high-quality prevention and intervention programs.** In order to achieve this goal, my research program focuses on three interrelated objectives: 1) understanding developmental contexts that are central to disparities in the health and academic outcomes of vulnerable populations; 2) understanding antecedents and consequences of high fidelity implementation; and 3) addressing barriers to the high-quality implementation of prevention/intervention programs in community settings serving children and families. I focus on mental health and academic problems with particularly high public health significance, including aggression, violence, trauma, and early skill deficits in language/literacy, along with the evidence-based prevention and intervention programs researchers have developed to promote healthy socioemotional and academic development. My research program is guided by the fields of dissemination and implementation science and prevention science. In line with best practices when working with underserved communities, I utilize a community-based participatory research approach.
